GTC Manufacturing is proud to announce continued production of the *complete line of 20 Series Clutches and Torque Converters*. In addition to our popular TC2 30 Series and TC40 40 Series Torque Converters, GTC announces three new models **TC20**, **TC340** and **TC94** Series which are currently in production with early shipments expected to begin within 90 days. 102 and 108 Series are also in development and will be available soon after. That's right, you asked for it and we at GTC heard you loud and clear!

The **TC2 Torque Converter kit** is the replacement for TAV2 30 Series Torque Converter, with all parts interchangeable. The TC2 is available for installation on engines with a 3/4" Bore crankshaft

The **TC40** 40 Series Torque Converter is a "mid-range" symmetrical system which is in between the 20, 30 Series, and the 90, 102 for larger engines. The TC40 is an ideal for engines up to 18 horsepower, making it a perfect match for larger or more powerful go karts and buggies.

GTC has seen great enthusiasm worldwide for our Comet products. Our current line of TC2 30 and 40 Series torque converters and the feedback from our clients and their customers has been nothing but stellar. However, users of Comet's 20, 340, 94, 102 and 108 Series Torque Converters have been somewhat ignored...Until now.

Production has been ramped up and we are eagerly awaiting the new models for quality and performance testing. We expect fit and finish, as well as performance to meet or exceed the same high standards as always.

During this exciting time, GTC is pleased to continue to expand our product line in our ongoing effort to support to the Powersports community we are a part of.

GTC Manufacturing is delighted to be able to serve this community of loyal, diehard, and fun-loving devotees.
